

BIOWERT TERRACE FLOORING

WWW.BIOWERT.COM

A TERRACE OUT OF MEADOW GRASS – regional, sustainable, worldwide one of a kind

Biowert terrace flooring is made out of an environment-friendly natural-fiber composite: AgriPlast^{BW}, which contains 25 percent recycled plastics and 75 percent cellulose won from meadow grass in the Odenwald in «Hessen».

Our production process helps conserve natural resources and is worldwide one of a kind.

Thanks to the innovative mounting system (Biowert Clip) our non-slip barefoot boards are especially easy to install.

Biowert floorboards come in the colors natural, brown and black.

Your benefits at a glance

- environment- and resource-friendly
- easy to install with a unique mounting system (Biowert Clip)
- can be laid in any direction, even at an incline (onto orthogonal substructures)
- guaranteed free of wood and PVC
- natural look and feel
- can be used with normal woodworking tools

Like wood, but better:

- more durable and easier to clean
- barefoot-friendly, no splinters or cracks
- non-slip even when wet
- no chemical pretreatment necessary, no varnish, no oil
- no warping
- no use of wood from unknown origins or tropical timber

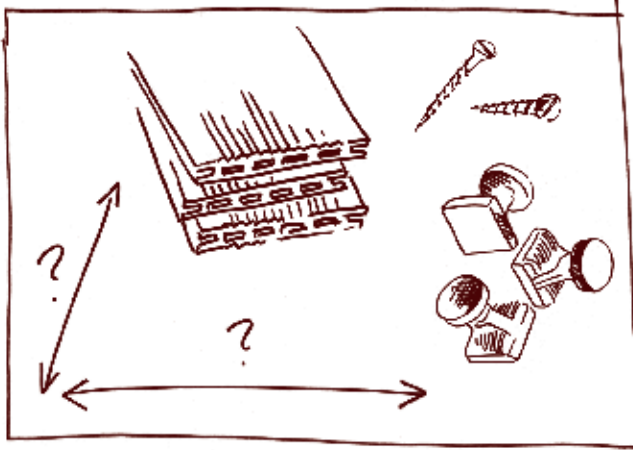

Installation made easy

Here you'll find an overview of how the installation works.

Please remember to follow our detailed deck installation instructions.

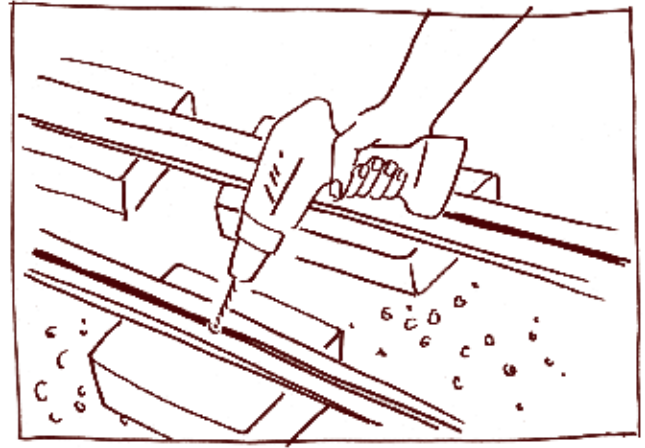

The instructions are available directly from us or as a download at

www.biowert.com/downloads/terrassendieleninfos

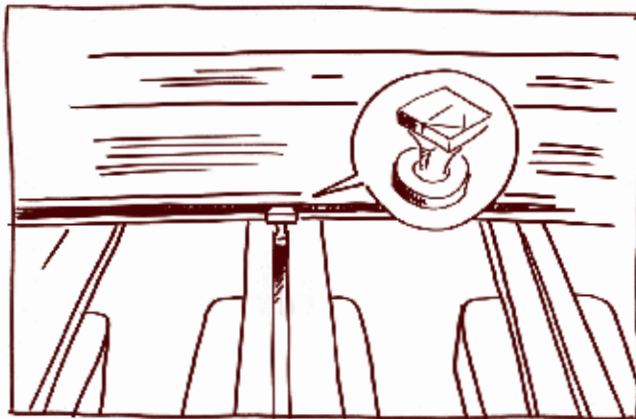

Step 1: Design.

Measure the area and determine the materials you'll need.

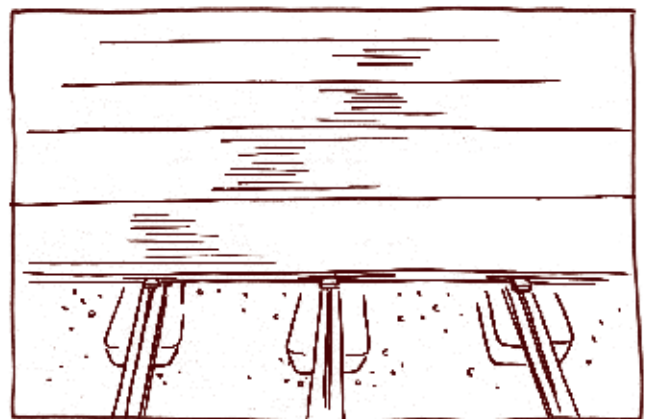

Step 2: Substructure.

Setup your support brackets and profiles.

Step 3: Biowert Clip.

Connect the floorboards to the profiles with Biowert Clips.

Step 4: Terrace flooring.

Only the first and last floorboards need to be fixed with screws.

Installing terrace flooring is simple with the unique Biowert Clip^{*}: only the first and last floorboards need to be fixed with screws, while all other boards are fixed with Biowert Clips. Unlike conventional fastening systems Biowert Clips let you lay the floorboards in any direction you wish.

Biowert terrace flooring is a natural product. As a result, just like with wood, an absolute uniformity in color can't be guaranteed. Because of the high percentage of natural fibers, weather conditions can have an effect on the color. Over time the boards develop a uniform «patina».
